

Sustainable Chilean sea bass

Code	Spec.	Price
FR15444	4 oz	\$16.50
FR154460Z	6 oz	\$17.50
FR15448	8 oz	\$17.95

The Conference for the Conservation of Antarctic Marine Living Resources (CCAMLR) and The National Oceanic Atmospheric Administration (NOAA) certify via Dissostichus Catch Documents (DCD) that all of Kendell's Chilean sea bass products are legally caught and sustainable.

CCAMLR is the premier international governing body, which determines acceptable quotas for Chilean Seabass. CCAMLR was established by the Convention for the Conservation of Antarctic Marine Living Resources, which employs an ecosystem approach to the conservation of marine living resources incorporating standards designed to ensure the conservation of individual populations and species and the marine ecosystem as a whole.

The U.S. is a Contracting Party to the Convention, as well as a member of CCAMLR.

All of Kendell's Chilean sea bass products are fished from vessels equipped with satellitelinked Vessel Monitoring Systems (VMS) that track vessel movements to insure compliance with set quotas.

All vessel VMS data must be reported to the centralized CCAMLR system in order to be imported into the United States. The United States does not allow Chilean sea bass into the country without proper documentation including, but not limited to, DCD's and CCAMLR's chain of custody

documents, referred to as Catch Documentation Scheme (CDS). The CDS requires fishing Captains, exporting officials and importing officials to sign off on the legality and sustainability of the catch.

Kendell's Chilean sea bass products are US Food and Drug Administration (FDA) & NOAA regulated as well as CCAMLR, National Marine Fisheries Service (NMFS) and Hazard Analysis Critical Control Point (HACCP) certified.
